REASONS FOR ALLOWANCE

1. Claims 43-45 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The closest prior art, namely Yugawa (Japanese Document No. 6122906 A), Moore et al. (U.S. Publication No. 2005/0022810), and Ueno (U.S. Patent No. 6,267,114) do not teach, suggest or motivate one of ordinary skill in the art to provide a method for generating oxygen in a vessel as disclosed in independent claims 43, 44 and 45. More specifically, the prior art does not teach the method of generating oxygen comprising a vessel including the limitations of adding water, a limiting reactant selected from sodium percarbonate and sodium perborate, a catalyst selected from an iron compound, iron oxide, a copper compound and copper oxide, and a heat absorbing comprising manganese and sodium as set forth in independent claims 43-45, wherein the oxygen is controlled by varying the amount of the limiting reactant and the catalyst; and the humidity and temperature are varied in the humidifier during the process and wherein an aqueous solution of soda ash is generated in the vessel.

Yugawa discloses a method for generating oxygen comprising a vessel and adding a predetermined amount of water and a predetermined amount of powder comprising sodium percarbonate to the vessel, wherein a predetermined amount of catalyst as well as a heat absorbing compound is added to said vessel. Yugawa does not disclose that the catalyst is one of; an iron compound, an iron oxide, a copper compound or a copper oxide or that the heat absorbing compound is a combination of manganese and sodium. Yugawa also does not disclose that the oxygen flow is

controlled by varying the limiting reactant or varying the amount of catalyst, generating an aqueous solution of soda ash in the vessel, or a humidifier.

Moore discloses a method for generating oxygen comprising a vessel and adding water, a manganese catalyst and a sodium percarbonate powder in the vessel to generate oxygen. The reference continues to disclose that that a humidifier is provided in order to moisten the generated oxygen. Moore does not disclose that the oxygen flow is controlled by varying the limiting reactant or varying the amount of catalyst, varying the amount of humidify or the temperature in the humidifier, or generating an aqueous solution of soda ash in the vessel. Moore also does not disclose that the catalyst is one of an iron compound, an iron oxide, a copper compound, or a copper oxide.

Ueno discloses a method for generating oxygen comprising a vessel wherein water and a sodium perborate powder are added with a catalyst of manganese salt. The reference does not disclose a heat absorbing compound or controlling the oxygen flow by varying the amount of catalyst or limiting reactant. Ueno also does not disclose a humidifier or a generation an aqueous soda ash in the vessel.

Therefore, the closest prior art of record does not disclose a method for generating oxygen comprising a vessel wherein water, a limiting reactant, a catalyst, and a heat absorbing compound are added to the vessel as set forth in independent claims 43, 44 and 45, and further wherein the oxygen flow is controlled by varying the amount of limiting reactant or catalyst as well as varying the amount of temperature or humidity to the humidifier.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
